# Business Overview

* Proper diagnosis and treatment of skin diseases is crucial in maintaining healthy skin.

* Preventing late diagnosis that causes permanent scarring, disfigurement and skin cancer.

* Skin disease classification tools can aid in early and accurate diagnosis of skin diseases.

* This project aims to develop a skin disease image classifier .

# Business Problem

* Skin diseases can significantly impact most people's health and quality of life.

* Cost, time and lack of accessibility birthed Derma AI.

## *Why us?*

*No cost*

*Accessible*

*No appointment*

# Objectives

Achieve a 95% skin detection accuracy

Have well trained models that easily detect the uploaded images

Aim for early detection of skin diseases

# Data Understanding

Our data comprises of skin images scraped from:

* DermaNet NZ Image Library

* ISIC 2019 Challenge
